Health & Benefits

June 2026 | Volume 342

United Kingdom

The UK is accelerating its independent employment-law agenda, including several reforms that diverge from EU frameworks. Employers should expect changes in areas such as worker status, leave entitlements, and consultation obligations. This divergence increases compliance complexity for companies managing both UK and EU workforces.

South Africa

South Africa is implementing new labor-market measures shaped by domestic political and social-protection priorities. Over the next three months, employers may see updates to benefits requirements, worker-rights enforcement, and compliance expectations. These changes reflect broader continental trends toward strengthening employment frameworks to support economic and social objectives.

China

Secured local benefits coverage in Canada for major retail brand.

Helped multinational Partner Desk client's HR team prepare annual benefits budget for management approval.

Set up new group benefits plan for technology client's Singapore-based employees.

Implemented expatriate medical plan for U.S. family relocating to Vietnam.

China's evolving public healthcare framework is creating new gaps—especially in outpatient and prescription benefits—that employers are now expected to fill. Insurers anticipate increased employer demand for supplemental medical coverage. This shift reflects a broader trend toward employer-driven healthcare access as public systems undergo structural change.
